Summary

Machine Learning and Backend Engineer with 2+ years building LLM-powered, microservices-based platforms. Architected 20+ services with Kafka and JWT/RBAC; deployed on AWS/GCP with Docker/Kubernetes. Delivered real-time order tracking and AI-driven summarization that boosted engagement by 50% and lessened manual review time in healthcare workflows. Value props include: microservices at scale, real-time systems, LLM integration, CI/CD, cloud deployments, security/RBAC, measurable business impact.

Experience

CTSS TECHNOLOGIES Private Limited

Software Development Engineer

Jan 2024–Present, Bhubaneswar

Tech Stack: JavaScript, Node.js, Express.js, MongoDB, Git, RESTful API, Flask

- Developed and upheld scalable backend systems for web applications
- Implemented **RESTful API** for efficient data exchange and communication between frontend and backend
- Executed robust security measures to ensure data integrity, user **authentication, and authorization**
- Utilized version control systems like **Git** for code management and collaboration
- Contributed to the development and deployment of Cloud Kitchen/Restaurants Food Delivery Application, resulting in 50% increased user engagement
- Integrated analytics and machine learning microservices into backend API to enhance product intelligence and automation

ALEDL TECH LLP

Backend Developer (Contingent)

Jun 2025-Jan 2026, Remote

Tech Stack - Node.js, Python, Google Cloud, FastAPI, Cloudinary, OpenAI, Anthropic, Hugging Face, MongoDB

- Enhanced and maintained scalable backend applications using Node.js and Python with FastAPI framework
- Integrated Google Cloud Platform services and Cloudinary API for efficient data storage and media management
- Built AI-powered applications leveraging OpenAI, Anthropic, and Hugging Face models for fine-tuned functionality
- Collaborated with development teams on AI research initiatives and presented technical presentations to stakeholders
- Managed database operations and executed data validation processes for reliable backend services
- Contributed to code reviews and sustained documentation standards for refined team collaboration

Technical Skills

Programming Languages: Python, JavaScript, Node.js, Java

Backend Frameworks: FastAPI, Express.js, Socket.io, JWT Authentication, RESTful API

Frontend Frameworks: HTML, CSS, React.js, TypeScript, Tkinter, PyQt6, Vue.js, Django

Databases: Oracle SQL, MongoDB, MySQL, Firestore, SQLite, Redis

Cloud Platforms: AWS (EC2, S3, EKS), Google Cloud Platform (GCP), Hostinger VPS,

AI/ML Technologies: TensorFlow, PyTorch, scikit-learn, OpenAI GPT, GCP, Healthcare NLP, Generative AI, Kaggle

DevOps Tools: Docker, Kubernetes, CI/CD (GitHub Actions), Nginx, Kong API Gateway, Terraform

Developer Tools: VS Code, IntelliJ IDEA, Git, GitHub, Jupyter, Google Colab, Ubuntu

Architecture Patterns: Microservices, Event-Driven Architecture, Apache Kafka, Service Discovery

Specialized Skills: Model Deployment, API Integration, Feature Engineering, Data Preprocessing, NLP Pipelines

Soft-Skills: Communication, Presentation, Decision Making, Team Leadership, Project Management, Team Management

CS Fundamentals: Software Engineering, Computer Networks, Operating Systems, Agile/Scrum, Compiler Design

Projects

Bitebuddie: Food Delivery Mobile Application

Tech Stack:

Backend: Node.js, Express.js, MongoDB, Redis, Socket.io, JWT Authentication

Microservices: API Gateway, Service Discovery, Event-Driven Architecture

DevOps: Hostinger VPS, Docker, Kong API Gateway, CI/CD Pipelines

- Architected scalable microservices platform serving a comprehensive food ordering ecosystem with 20+ independent services using **Node.js** and **MongoDB**

- Applied event-driven architecture using **Apache Kafka** for reliable order processing, reducing system failures by ensuring guaranteed message delivery
- Expanded real-time tracking system using **Socket.io** enabling live order status updates across user, kitchen, and delivery partner applications
- Orchestrated **MongoDB** sharding strategy based on **geographical locations**, optimizing query performance for city-based food delivery operations
- Enforced **JWT authentication** system with **OTP verification** and role-based access control for multiple user types and admin interfaces
- **Integrated prompts** into **production-grade AI microservices** with logging, versioning, and response evaluation.
- Created systematized approval workflows for kitchen onboarding with **city validation**, streamlining business operations and partner management

Healthism - Healthcare Platform

Tech Stack:

Backend: Node.js, Express.js, Python FastAPI, MongoDB, Firestore, JWT Authentication

AI/ML: Google Cloud Vision, Healthcare NLP, Claude 4.5 Sonnet, Prompt Engineering, OCR Processing

Microservices: Kong API Gateway, Service Discovery, Cross-Service Communication

Cloud & Integrations: Google Cloud Platform, Docker, Cloudinary, FHIR Standards

- Architected healthcare microservices platform serving prescription digitization and appointment management
- Enforced **AI-powered OCR pipeline** using **Google Cloud Vision** and **Healthcare NLP**, processing medical prescriptions with mechanized clinical entity extraction and summarization
- Engineered and optimized **prompts** for LLMs to perform **summarization, information extraction, classification, and Q&A** with high accuracy
- Merged **Claude 4.5 Sonnet AI** for computerized prescription **summarization**, reducing manual review time and improving clinical **decision-making accuracy**
- Reduced hallucinations by using instruction tuning, output validation, and fallback logic
- Generated hybrid database architecture using MongoDB and Firestore for optimal healthcare data storage, ensuring **FHIR compliance and patient data security**
- Planned **Kong API Gateway** with JWT authentication and **role-based access control** for secure multi-stakeholder healthcare platform access
- Built automated pharmacy fulfillment workflow with patient-confirmed delivery tracking and **real-time status updates** across the healthcare ecosystem

Glass Measurement - Desktop Application

Tech Stack: Python, PyQt6, MongoDB, Excel Integration, Data Validation

- Improved Python-based desktop application with **PyQt6 GUI framework** for computerized glass measurement calculations and reporting system
- Incorporated **MongoDB database** for persistent data storage with Excel import/export functionality for bulk data processing workflows
- Applied real-time calculation engine supporting multiple unit conversions and dynamic cost/area computations with **industry-standard validation rules**
- Built a comprehensive reporting system with **Excel generation**, historical data management, and customizable analytics for operational insights
- Initiated responsive user interface with **multi-tab crafted, editable data tables, and batch update** capabilities for enhanced user experience

Education

DRIEMS University | Cuttack

Bachelor's of Technology - (Computer Science & Engineering)

+2 High School Narpatganj, Bihar (Intermediate)

Bihar Secondary Education Board - Patna

High School Narpatganj, Bihar (Matriculation)

Bihar Secondary Education Board - Patna

Certification

Python Programming (PythonSoft)

Data Science with Python (Internshala)

Data Analytics with Python (IIT Roorkee)

Artificial Intelligence with Python (LearningBot)
