Summary

Backend & AI/ML Engineer with 2.5+ years building LLM-powered microservices on AWS, GCP, and Oracle Cloud using Python, Node.js, and Docker/Kubernetes. Delivered a 50% user-engagement lift on a food-delivery platform, reduced manual content-review time by 40% through automated LLM summarization pipelines, and cut LLM hallucination rates by 35% via prompt-engineering frameworks in production.

Technical Skills

Languages: Python, JavaScript/Node.js, Java, TypeScript

Backend: Django, FastAPI, Express.js, Socket.io, RESTful API, JWT/RBAC, Apache Kafka, Kong API Gateway

AI/ML: OpenAI GPT, Anthropic Claude, Hugging Face, RAG Pipeline, Healthcare NLP, Prompt Engineering

Databases: MongoDB, Oracle MySQL, PostgreSQL, Redis, Firestore, SQLite, Celery

Cloud & DevOps: AWS, GCP, Docker, Kubernetes, Terraform, GitHub Actions CI/CD, Nginx

Frontend: React.js, Vue.js, HTML/CSS

Architecture: Microservices, Event-Driven Architecture, Service Discovery, FHIR Standards

Soft Skills: Communication, Presentation, Leadership & Team Collaboration, Client Meetings

Experience

AXIS MY INDIA Limited

Python Development Engineer

Jun 2026–Present, Mumbai

Stack: Python, Django, MySQL, Redis, Gemini 2.5 Flash, LLM, Flask, RESTful API, GCP, AI/ML

- Architected a GCP-native AI audit pipeline (Gemini 2.5 Flash, Pub/Sub, Cloud Functions) targeting 100% automated survey coverage, up from a 5–15% manual sampling baseline
- Engineered a hybrid scoring system blending LLM judgment (45% weight) with 3 deterministic rule-based fraud detectors, eliminating single-point AI failure on fraud classification
- Authored an 84-point architecture gap analysis and corrected system design document, aligning implementation with a GCP-native, GPU-free serverless pipeline
- Built a Celery-based idempotent sync pipeline with upsert logic and a data-driven training rule engine, replacing manual CSV batch processes with automated, failure-tolerant data synchronization

CTSS TECHNOLOGIES Private Limited

Software Development Engineer

Jan 2024–Jun 2026, Bhubaneswar

Stack: Node.js, Express.js, MongoDB, Redis, Flask, RESTful API, Git

- Designed and shipped a cloud-kitchen food delivery platform end-to-end, driving a 50% increase in active user engagement within 3 months of launch
- Developed and maintained RESTful APIs consumed by 3 client teams, enforcing JWT and RBAC authentication with zero unauthorized-access incidents across the deployment period
- Integrated ML-based real-time order analytics, cutting manual reporting effort by approximately 30% and surfacing demand patterns used in stocking decisions
- Reduced average bug-to-deploy cycle from 4 days to under 2 days by owning CI/CD (GitHub Actions) and instituting structured code review

Projects

Bitebuddie: Food Delivery Platform

Stack: Node.js, Express.js, MongoDB, Redis, Socket.io, Apache Kafka, Docker, Kong API Gateway, JWT

- Building a Node.js microservices food-delivery platform (auth, address, menu, and cart services) with OTP-based authentication, Redis session management, and Kafka event streaming for KYC verification flows
- Designed a configurable pricing engine for the cart service, supporting dynamic surcharges and multi-tier discount rules
- Planned a microservices architecture spanning 20+ independent services, using Apache Kafka for event-driven order

- processing with guaranteed message delivery
- Synchronized real-time order tracking via Socket.io across customer, kitchen, and delivery-partner apps simultaneously
 - Implemented MongoDB geo-sharding for city-based queries and a Kong API Gateway with OTP and RBAC, securing multi-role platform access

Healthism - Healthcare Microservices Platform

Stack: Python, FastAPI, MongoDB, Firestore, Google Cloud Vision, Healthcare NLP, Claude 4.6 Sonnet, GCP, Docker, FHIR

- Developed an AI-powered OCR pipeline using Google Cloud Vision and Healthcare NLP to digitize medical prescriptions with automated clinical entity extraction.
- Integrated Claude 3.5 Sonnet for prescription summarization with instruction tuning and fallback logic, measurably improving clinical decision-making accuracy.
- Architected a FHIR-compliant hybrid MongoDB and Firestore database with Kong JWT authentication, supporting secure multi-stakeholder access across the platform.

Glass Measurement - Desktop Application

Stack: Python, PyQt6, MongoDB, Excel Integration

- Developed a PyQt6 desktop application featuring a real-time calculation engine for multi-unit conversions, dynamic cost/area computation, and Excel bulk import/export.
- Built MongoDB-backed reporting with historical data management and customizable analytics dashboards for production-floor operational insights.

Education

DRIEMS University Cuttack Bachelor's of Technology - (Computer Science & Engineering)	2020 - 2024
+2 High School Narpatganj, Bihar (Intermediate) Bihar Secondary Education Board - Patna	2019 - 2020
High School Narpatganj, Bihar (Matriculation) Bihar Secondary Education Board - Patna	2017 - 2018

Certification

- Python Programming (PythonSoft)
- Data Science with Python (Internshala)
- Data Analytics with Python (IIT Roorkee)
- Artificial Intelligence with Python (LearningBot)
